Product Information Sheet

Product
Duni Tissue 1-, 2-, 3 and 4-ply napkins

Material
Tissue paper made from wooden pulp

Additive
Dyes and printing inks (for printed products)

Packaging
Inner: Plastic film of polypropylene (PP) or polyethylene (PE)
Outer: Corrugated board box

Field of Application
The products are intended for enhancing the meal and serving environment.

Regulation (EU) 2025/40 on Packaging and Packaging Waste (PPWR)
The packaging of this product complies with the applicable requirements of Regulation (EU) 2025/40 on Packaging and Packaging Waste (PPWR). Compliance is supported by technical documentation maintained by the manufacturer. Certain PPWR requirements will be further specified through delegated acts, implementing acts, guidance and harmonized standards. Compliance is therefore assessed against the applicable provisions of the Regulation and available guidance at the time of issue. For the PPWR Declaration of Conformity (DoC), please see the separate PPWR DoC document.

Environmental Aspects
Product
The tissue napkins are manufactured from Totally Chlorine Free pulp (TCF), or/and Elementary Chlorine Free pulp (ECF), i.e. bleaching chemicals used are oxygen, hydrogen peroxide, chlorine and ozone. The pulp is white or dyed. Printing is done with water based flexographic printing ink.

Product is FSC certified according to “Mixed Sources” certification number DNV-COC-000148.

Most Duni unicolored and printed (except gold and silver) tissue napkins are licensed to be labelled with the Nordic Environmental Label ‘The Swan’. License number 3005 0013.

All unicolored and some printed napkins are certified according to Test Program with reference OK 2 edition D “Home compostability of products”, No. TA8021802593. Printed napkins can be labelled with OK Compost only, if ink amount calculation is positive.

PFAS (per- and polyfluoroalkyl substances) are **not** being used in any step of the manufacturing of the products covered by this data sheet.

Packaging
Polypropylene or polyethylene is used for packaging purposes.

The corrugated board box is unbleached and to a large extent made of recycled fiber.

Product Safety
The product (incl. printing inks when applicable) fulfils the following:

- Article 3, 11(5), 15 and 17 of Regulation (EC) No. 1935/2004 of the European Parliament and of the Council of 27 October 2004 on materials and articles intended to come into contact with food (Framework regulation).
- Commission regulation (EC) No 2023/2006 of 22 December 2006 on good manufacturing practice for materials and articles intended to come into contact with food (GMP regulation).
- Lebensmittel-, Bedarfsgegenstände und Futtermittelgesetzbuch (LFGB) of 20. December 2022.
- German BfR Recommendation XXXVI. Paper and board for food contact (BfR - German Federal Institute of Risk Assessment).
- Order No. 681 of May 25 (2020) from Danish Ministry of Environment and Food on ban of per- and polyfluoroalkyl substances (PFAS) in paper and cardboard food contact materials.
- Dutch Warenwet VGB 2014-03
- Swiss Ordinance No. 817.023.21 on Materials and Articles in contact with Food from 23rd November 2005 (Swiss Consumer Goods Ordinance).
- Duni manufacturing units are certified according to the international quality system ISO 9001. They have also implemented the environmental management system ISO 14001.

End of Life
Compostability
Products bearing the OK Compost HOME label are certified as compostable in a home composting environment. Under appropriate home composting conditions, the products are designed to biodegrade and disintegrate.

Ok Compost Home
Certificate for the awarding and use of the OK Compost HOME conformity mark: TA8021802593.

In some regions, certified compostable products may be accepted together with food waste. Disposal rules vary locally, therefore please consult your local waste management provider for guidance on the appropriate disposal route.

Recycling
Used products should be handled according to local regulations, for best guidance, please check with local waste handling company.

Recycling of the packaging material (plastic and the corrugated board) is possible.

Energy Recovery
Incineration facilities for energy recovery are dependent on local infrastructure. Incineration for energy recovery is a good alternative when material recovery is not available by recycling.

Validity
This is issued 2026-09-04. It is revised when there is a change in the manufacturing process, in the product or in legislation.
